

Permanent TSB Commission Summary Document

A commission rate of a certain percentage (currently 0.25% per annum) will apply to the average daily balance of all amounts held in customer's accounts in the preceding calendar month. The sum representing the commission for that calendar month will be calculated by applying the monthly equivalent of the commission rate to the average daily balance (note that the Bank reserves the right to alter the commission rate and/or the formula for its calculation from time to time).
